

Save 15-35% of Energy Costs with ONE SIMPLE SWITCH

- **The only cost-effective, wireless energy management system that controls the 3 largest energy consumers: HVAC, lighting and "phantom" load on outlets—all with the flip of one switch.**

- HVAC - Easy to use economy mode saves more energy than a 7-day programmable thermostat.
- Lighting - no more running around trying to ensure all lights are off.
- Outlets/Phantom Power - cuts power to outlets where electricity is used by electronics - even when turned off (computers, entertainment centers, etc.)

- **Wireless** - easy to retrofit existing facilities & homes

- **Easy to Install** - uses most types of existing electrical boxes, just change the outlet or switch to retrofit

- **Component Based System** - install as few or as many components as you need

- **Expandable & Portable** - add and move components whenever you want and take it with you when you move

- **Fast Return on Investment** - often in 1-3 years

- **18-month Warranty on All Components**

What Is GreenSwitch®?

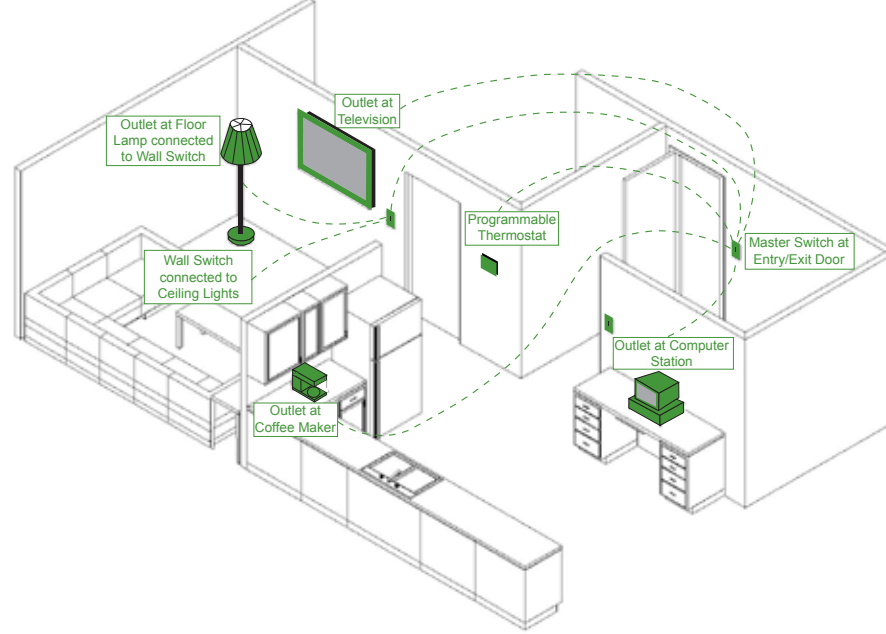

GreenSwitch is a simple energy management system designed to eliminate phantom power consumption, minimize the issue of lights being left on in the house, and provide thermostat set back control that matches the homeowners' specific schedule and desires. Just imagine leaving your home and having all the unnecessary power and lights turned off and having your heat or air conditioning setback to your individual desire with just one switch. When televisions, computers, stereos, phone chargers, etc. are turned off, electricity still flows to them even in the off mode. Lights are inadvertently left on periodically. The Dept. of Energy estimates that only about 10% of programmable thermostats purchased are programmed correctly. GreenSwitch is a perfect solution for multiple energy challenges that face us daily. It solves problems at a very low cost. We are not asking customers to do more, we want them to do less; take one action instead of many.

Save 15-35% of Energy Costs with ONE SIMPLE SWITCH

Instead of unplugging power strips, "policing" the house for left on lights or adjusting the thermostat at the end of the day (or upon leaving the house), GreenSwitch allows you to turn off one master switch that is connected to various sources of power in and around your home. This master switch cuts the energy going to those electrical sources therefore eliminating draining electricity from our homes that we pay for but don't actually use.

How Does It Work?

GreenSwitch operates on one switch. One convenient slide of the GreenSwitch puts you in custom control of your electricity usage. With GreenSwitch, you designate which outlets and lights are affected and you set the personal settings for your programmable climate control. Single-control outlets provide the ability to customize each outlet, allowing you, for example, to turn off the TV in one plug thus eliminating the phantom power usage while keeping the digital video recorder in the other socket of the same outlet on and recording.

You can also set your system up in zones, where one switch powers down your living area when you retire and another switch controls the home office that is used late into the night. Also, each component relays the wireless signal, giving GreenSwitch infinite range. This means that you can turn the lights off in the garage or backyard shed from the convenience of your kitchen or entry way.

How Easy Is It To Install?

Although authorized dealer installation is required, the installation of GreenSwitch is easy. Simplification and convenience were the primary drivers in product development at GreenSwitch. All of the "brains" in GreenSwitch are in the master switch itself. There are no external components that must be placed elsewhere. GreenSwitch can be retrofitted into existing electrical systems and, in the average household, can be installed in several hours. In addition, the savings are immediate. GreenSwitch saves you money and reduces your carbon footprint at the same time, giving you the opportunity to make a difference for your family and the world. All this with the slide of one convenient switch!
